Summary

Enthusiastic Full Stack Web Developer with a strong passion for learning and problem-solving. Adept at turning ideas into functional digital solutions with expertise in modern JavaScript frameworks and backend technologies. Proven track record of building scalable APIs, implementing asynchronous processing systems, and optimizing database performance. Seeking to leverage strong technical skills and creative problem-solving abilities to make a meaningful impact on the development of innovative web applications.

Technical Skills

Languages: Python, JavaScript, TypeScript, HTML, CSS
Backend: Node.js, NestJS, Express, REST APIs
Frontend: React, Next.js, Redux, TailwindCSS, Framer Motion, Bootstrap, Recharts
Databases: MongoDB, PostgreSQL, Supabase
Tools & Infrastructure: Vite, Redis, Kafka, Socket.io, Git, GitHub, GitLab, Docker, Drizzle ORM, Agile/Scrum methodologies

Projects

Donor Database Application

- Collaborated with a team of web developers to create a comprehensive Donor Database for Persevere's non-profit organization to track donors, volunteers, and prospects while calculating donation amounts and automating relationship management tasks.
- Designed and created the dashboard and forms interface. Built interactive charts using Recharts to visualize annual donation trends and donor demographics. Implemented robust state management solution utilizing Redux Toolkit.

Technologies: React, JavaScript, Node.js, Express, Redux, TailwindCSS, Recharts, GitLab

Cuttin' Up Community Project Website

- Built a full-featured non-profit website serving justice-impacted individuals with barbering/cosmetology training.
- Developed responsive React application with 5 core pages, dynamic routing, and modern component architecture.
- Implemented advanced CSS animations, gradient designs, and mobile-optimized layouts using Tailwind CSS.
- Integrated multimedia content including embedded videos and external donation platform connectivity.

Technologies: React, JavaScript, TailwindCSS, Framer Motion

Experience

Full Stack Developer

Hype Live | Remote | September 2025 – January 2026

Focused on building scalable backend systems and APIs using modern technologies to support creator platform features and analytics.

Key Accomplishments:

- Developed backend REST APIs using NestJS to support core platform features for creator engagement and analytics tracking.
- Architected asynchronous event-driven systems using Kafka to process high-volume user interactions, ensuring non-blocking API responses and scalable performance for growing user base.
- Implemented advanced Redis caching strategies with batch processing and deduplication mechanisms to significantly reduce database load while maintaining real-time data accuracy.
- Designed and optimized database schemas with proper indexing strategies, enabling efficient querying for analytics and supporting time-based data aggregations.
- Built paginated API endpoints with complex database joins and filtering logic using Drizzle ORM, delivering user-facing features for profile engagement insights.
- Integrated new metrics into existing analytics systems with time-based comparisons and percentage change calculations, maintaining consistency with established platform patterns.
- Managed database migrations and schema evolution to support feature development while maintaining data integrity and backward compatibility.
- Participated in code reviews and refactored architecture based on senior engineer feedback to prevent circular dependencies and improve code maintainability.
- Collaborated in Agile environment with cross-functional teams, documented technical implementations, and adapted quickly to evolving product requirements.

Software Developer
Banyan Labs LLC | Remote | July 2025 – September 2025

Focused on building responsive and accessible user experiences using modern JavaScript frameworks and established design systems.

Key Accomplishments:
- Engaged in daily Agile/Scrum ceremonies, including standups and sprint planning, to maintain alignment and deliver iterative improvements.
- Worked closely with cross-functional teams to architect, develop, and launch full-stack applications, such as an AI-driven, voice-enabled assistant.
- Managed version control through Git and GitHub, performing peer code reviews and supporting efficient, collaborative development practices.
- Assisted with deployment processes, resolved technical issues, and ensured the delivery of scalable, user-focused software solutions.

Junior Web Developer
Persevere | Goodyear, AZ | December 2024 – April 2025

Key Accomplishments:
- Designed and implemented the front end for various components such as the dashboard, user forms and data visualization tools.
- Implemented a scalable state management solution utilizing Redux to manage application state effectively.
- Developed REST APIs using Node.js and Express.js for seamless interaction with MongoDB database.
- Wrote clean, maintainable, and efficient React components following best practices.
- Documented codebase, APIs, and other technical aspects for future reference and collaboration among team members.

Education

Bachelor of Science – Computer Science
Yavapai College | Prescott, AZ | January 2026 – Expected January 2028

AI-Augmented Builder Cohort
Next Chapter | Remote | April 2026 – July 2026

An intensive builder program focused on shipping production-ready, full-stack applications using AI-augmented development workflows.

Key learning outcomes include:

- Building and deploying multiple full-stack applications from concept to production using modern frameworks and cloud platforms.
- Integrating large language model APIs into applications, including streaming responses, retrieval-augmented generation, and speech transcription.
- Applying prompt engineering techniques and agentic AI coding tools to dramatically accelerate development cycles.
- Verifying and validating AI-generated output against authoritative primary sources to ensure accuracy and reliability.
- Practicing product development fundamentals including proposals, product requirements documents, and risk assessments.
- Scripting, producing, and editing a professional product demo video.
- Delivering weekly technical presentations and iterating on work through peer and instructor feedback.

Full Stack Web Developer Certificate
Persevere Now Coding Bootcamp | Goodyear, AZ | July 2024 – July 2025

A 52-week intensive program focused on mastering the MERN (MongoDB, Express, React and Node.js) stack.

Key learning outcomes include:

- Building dynamic, responsive, and scalable web applications using React, Redux, and other frontend technologies.
- Designing and implementing RESTful APIs with Node.js and Express.js for seamless interaction with MongoDB databases.
- Implementing state management solutions utilizing Redux to manage complex applications effectively.
- Writing clean, maintainable, and efficient code following best practices in web development.
- Learning modern tools, libraries, and frameworks.
- Continuously refining and improving applications based on user feedback, performance metrics, and new best practices in web development.
- Gaining a strong foundation in computer science concepts such as algorithms, data structures, and software design patterns.
- Developed a comprehensive project tracking application using React and Redux for state management, featuring role-based authentication and multiple dashboard interfaces tailored to different user permissions and responsibilities.
- Created interactive data visualizations using Recharts to display project progress, timelines, and key performance metrics across various user dashboards.
- Built a real-time chat application from scratch using Socket.io, enabling instant messaging capabilities with features including user presence indicators, message history, and seamless connection management.
- Implemented secure user authentication and authorization systems with role-based access control to ensure appropriate data visibility and functionality for different user types.
- Designed and developed responsive user interfaces that provide optimal experience across desktop and mobile devices.
